

Pre-Set Flow Controller

DS1541

Features:

- Maintains controlled water supply irrespective of pressure fluctuation
- Reduces pressure surge and water wastage
- Helps eliminate costly water bills
- Ease of installation and operation

Description:

The Pre-Set flow control valves provide a constant flow rate, independent of line pressure changes, for pure liquid applications. Operation is by means of a rubber orifice that reduces in size as the pressure increases, thus balancing the flow. Installation is possible on any plane to fit existing pipework. Available either screwed or as a wafer to fit between flanges. All materials are WRC approved for use in drinking water systems.
